

ROOF PROGRAM

Our fortified churches in Transylvania are a unique heritage that looks back on 800 years of history. These impressive buildings are not only architectural masterpieces, but also important witnesses of our cultural and religious history. However, time has left its mark and many of these historic fortified churches are in urgent need of repairs. That is why we have launched the roof program. This important project focuses on roofs, windows and doors, as well as on water drainage. In addition, where necessary and possible, measures will be taken to combat masonry dampness in order to safeguard the structure and stability of the buildings in the long term.

How you can help:

Your donation can make a significant difference!

With your support we can:

- Repair roofs and roof drainage: protect the fortified churches from the damaging effects of water and weather by repairing leaks and ensuring effective drainage
- Improving water drainage: by improving the drainage of rainwater at ground level, we prevent water from penetrating the foundation and causing damage to the building fabric
- Fighting masonry dampness: restoration of damp walls to ensure the long-term stability and preservation of the building stability and its preservation.

Be part of our mission:

Every donation counts and brings us one step closer to our goal of preserving the fortified churches for future generations. Your contribution not only helps to safeguard the building fabric but also helps to preserve our cultural heritage. Together we can ensure that these historic buildings remain as symbols of our history and identity. Become a supporter of our roof program with your donation and help to protect and preserve this important cultural heritage.
