

EMERGENCY PROGRAM

Our emergency program aims to repair the most urgent damage to a fortified church.

These include:

- masonry repair and stabilization: stabilization of the masonry using traditional techniques
- reconstruction of degraded areas: using traditional materials to preserve the historic appearance
- preventive measures: protecting the structure from the effects of weather and other external factors

How you can help:

All these measures are largely funded by donations. Every support - however small - helps to save Transylvanian fortified churches from decay and to keep their history alive.

Every contribution counts - your donation will help us purchase the necessary materials and hire skilled craftsmen

Volunteering - get actively involved in our on-site activities. *Important! Not all sites are suitable for volunteering.*

Spread the news - tell as many people as possible about our initiative to increase the chances of getting the necessary support.

Be part of our mission:

Donate today and help us preserve Transylvanian fortified churches for years to come. Every contribution is a valuable asset for the preservation of our past.
